

# External Roof Transport

## Roofbike

The roofbike makes it possible to enter the small gutters of the greenhouse. It can be used to inspect or clean the roof in a safe manner.

As seen in the picture, the roofbikes can be parked at the rear of the service platform.

This bike can be safely ridden through the gutter because the bike is supported with 2 pcs. in width adjustable ski's which is supported on the deck. The bike fits into any gutter, and is suitable for every deck type.

## Gutter Walker

Another alternative for entering the gutter safely is the gutter walker. It helps to balance.

Besides the roofbike Hortlilife B.V. delivers a gutter walker. The underside of the ski's are lined with plastic so they glide easily over the roofbars.

## Repair Shuttle

Modern greenhouses with their high post length and huge glass sizes are very difficult and risky to repair. The Repair Shuttle makes it possible to repair the roof safely from the outside which prevents crop damage and the transmission of viruses.

Ceres B.V. supplies Repair Shuttles which can be driven on the greenhouse by two people. Due to the construction the carriage is strong but still light in weight. On the carriage can also a chair be placed so that you can perform maintenance on your sprinklers for example. Optional is a glass rack with suction cups so that the car can be used for glass repairs.
